

I-215 / NEWPORT ROAD INTERCHANGE PROJECT

Fact Sheet

Project Overview

This project will reconstruct the existing interchange located on Interstate 215 (I-215) at Newport Road in the City of Menifee. The proposed improvements would reconstruct the existing diamond interchange into a partial cloverleaf interchange configuration, with northbound and southbound loop on-ramps. The existing bridge would be widened to accommodate six through lanes of traffic, including outside shoulders that will be used as bike lanes and a sidewalk on the north side of the bridge.

Existing Condition/Need

Newport Road is an east-west arterial located in southwestern Riverside County, which provides critical access to and from the freeway system and is a gateway to the City of Menifee.

The current interchange is a diamond type configuration that requires left turns from Newport Road for accessing the freeway. Currently, cars back up from the Haun Road and Antelope Road intersections, blocking the freeway ramp intersections. Cars waiting to turn left to access the freeway back up into through lanes on Newport Road blocking traffic.

Project Status

- Final Design Approved
- Utility Relocation
- Start of Construction
- End of Construction

October 2013
August 2014
April 2015
Winter 2016

Traffic volumes are forecast to grow to **62,000** Vehicles per day traveling on Newport Road in 2030.

Construction Duration
April 2015 - Winter 2016

Construction Bid
\$31 Million

Location

Partnering Agencies
