PLANNING & BUILDING A SUCCESSFUL FUTURE

## INTERSTATE 215/SCOTT RD INTERCHANGE

### EXISTING NEED/CONDITION

The County of Riverside, in cooperation with Caltrans, the City of Menifee and the City of Murrieta, proposes to modify the existing Interstate 215/Scott Road interchange within the City of Murrieta and the City of Menifee in an effort to improve circulation and to meet future traffic needs. The existing bridge cannot accommodate existing or forecasted traffic volumes, thereby restricting the flow of persons and goods through the interchange.

### PROJECTED GROWTH

Rapid growth and development within the Menifee Valley and the surrounding communities is projected to increase the population by 83% between 2000-2020, further degrading traffic conditions, and potentially increasing emergency response times and accidents.

- The current Average Daily Traffic on Scott Road in 2016: 21,700 vehicles.
- The projected Average Daily Traffic on Scott Road in 2035: **70,000 vehicles**

### PROPOSED IMPROVEMENTS

- Reconstruction of the Scott Road interchange
- Widening of Scott Road (near the I-215) and overcrossing to three lanes in each direction plus turn lanes
- Addition of auxiliary lanes on I-215 prior to and after the on and off ramps
- Drainage, lighting and sign improvements
- Ramp metering on all on-ramps
- Signal modifications
